

Add enhanced device functionality to your Network Management Software

- Get real-time information on the status of your networked printers and MFPs
- Make full device functionality available to more users, more of the time
- Reduce costs by managing your networked document devices centrally

Connectivity – harnessing the full power of networked output devices

In today's atmosphere of heightened competition and more sophisticated customer demands, the sharing of key document resources across digital networks is improving the efficiency and productivity of businesses everywhere. Our new breed of advanced, printers and multifunctional products (MFPs) utilize the power of centralised management and access, to provide reliable and flexible document output solutions that will integrate seamlessly into your network environment.

Nashuatec's unique approach, links people with knowledge and expertise, combining our wide experience of innovative, document related Products and Software Solutions with our world class Business and Professional Services to deliver the best Total Document Solutions for your business.

TOTAL DOCUMENT SOLUTIONS

Specialised connectivity tools for Network Management Software

Today's advanced network management products provide Network Administrators with the power to identify and monitor all devices present on a network including PCs, printers and multifunctional products. Tivoli Netview, CA Unicenter and HP Openview are all capable of mapping a detailed structure diagram showing the location and status of all networked devices.

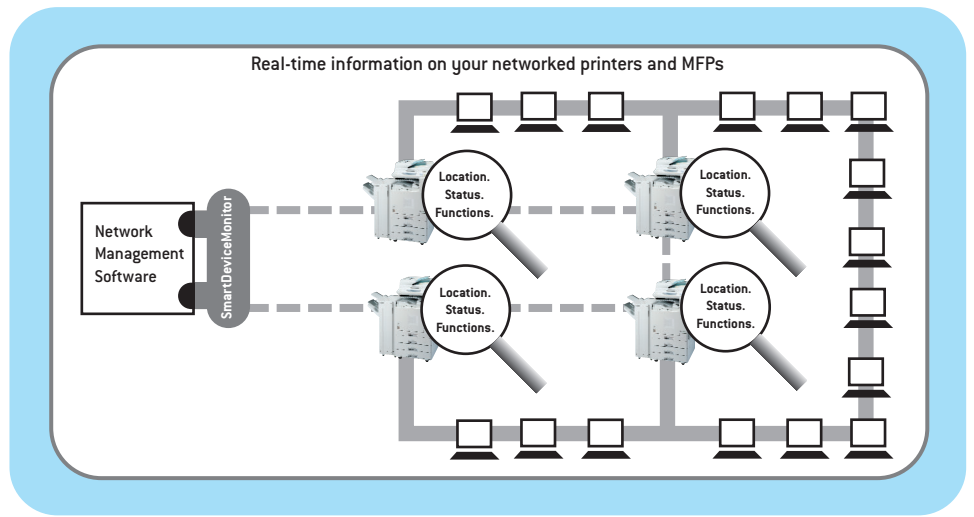

This is extremely useful for distributed networks in larger organisations. Network Administrators can monitor device status in real time and minimise downtime and any maintenance needed to return a device to operational mode.

Clearly, any business will achieve substantially better results if the full functionality of networked printers and MFPs are fully recognised by the Network Management Software (NMS).

The constant challenge to Network Administrators is to reduce Total Cost of Ownership by making more functionality available to more people, more of the time, while managing all devices centrally.

Our specially designed SmartDeviceMonitor software plug-in works with your Network Management Software to recognise all of our connected devices and their installed options. It provides IT Managers with a window to all of our devices that enables them to see their location, status and full functionality.

SmartDeviceMonitor works transparently behind the Network Management Software allowing status information to be displayed directly in the NMS environment. By using SmartDeviceMonitor you will receive detailed information on the status of any detected device, which will inform you when it needs attention. For instance, when the hardware is ready to use the icon is green and when it needs more paper the icon will turn to amber.

The SmartDeviceMonitor Solution

SmartDeviceMonitor is the easy, efficient route to a well managed and highly productive networked printing environment.

SmartDeviceMonitor for administration can also be launched independently enabling a Network Administrator to access the advanced functionality and printing options of any selected device. By adding functionality to your Network Management Software, this tool saves time, reducing administrative tasks associated with accessing and managing document output devices.

Business benefits are:

- Increased information for IT resource
- More effective management of our devices
- Centralised control of hardware
- Real-time status information for proactive management

Fast access via on-line downloads
